

Changing the Face of Distributor Engagement

Shell Virtual Assistant

Mark Raynes,
Technology Manager, Shell Global Solutions

April 2016

DEFINITIONS & CAUTIONARY NOTE

The New Lens Scenarios are part of an ongoing process used in shell for 40 years to challenge executives' perspectives on the future business environment. We base them on plausible assumptions and quantification, and they are designed to stretch management to consider even events that may be only remotely possible. Scenarios, therefore, are not intended to be predictions of likely future events or outcomes and investors should not rely on them when making an investment decision with regard to Royal Dutch Shell plc securities.

The companies in which Royal Dutch Shell plc directly and indirectly owns investments are separate entities. In this document "Shell", "Shell group" and "Royal Dutch Shell" are sometimes used for convenience where references are made to Royal Dutch Shell plc and its subsidiaries in general. Likewise, the words "we", "us" and "our" are also used to refer to subsidiaries in general or to those who work for them. These expressions are also used where no useful purpose is served by identifying the particular company or companies. "Subsidiaries", "Shell subsidiaries" and "Shell companies" as used in this document refer to companies over which Royal Dutch Shell plc either directly or indirectly has control. Companies over which Shell has joint control are generally referred to as "joint ventures" and companies over which Shell has significant influence but neither control nor joint control are referred to as "associates". The term "Shell interest" is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in a venture, partnership or company, after exclusion of all third-party interest.

This presentation contains forward-looking statements concerning the financial condition, results of operations and businesses of Royal Dutch Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management's current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Royal Dutch Shell to market risks and statements expressing management's expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as "anticipate", "believe", "could", "estimate", "expect", "intend", "may", "plan", "objectives", "outlook", "probably", "project", "will", "seek", "target", "risks", "goals", "should" and similar terms and phrases. There are a number of factors that could affect the future operations of Royal Dutch Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this presentation, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell's products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, fiscal and regulatory developments including potential litigation and regulatory measures as a result of climate changes; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; and (m) changes in trading conditions. All forward-looking statements contained in this presentation are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional factors that may affect future results are contained in Royal Dutch Shell's 20-F for the year ended 31 December, 2015 (available at www.shell.com/investor and www.sec.gov). These factors also should be considered by the reader. Each forward-looking statement speaks only as of the date of this presentation, [DATE]. Neither Royal Dutch Shell nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this presentation. There can be no assurance that dividend payments will match or exceed those set out in this presentation in the future, or that they will be made at all.

We use certain terms in this presentation, such as discovery potential, that the United States Securities and Exchange Commission (SEC) guidelines strictly prohibit us from including in filings with the SEC. U.S. Investors are urged to consider closely the disclosure in our Form 20-F, File No 1-32575, available on the SEC website www.sec.gov. You can also obtain this form from the SEC by calling 1-800-SEC-0330.

CONTENTS

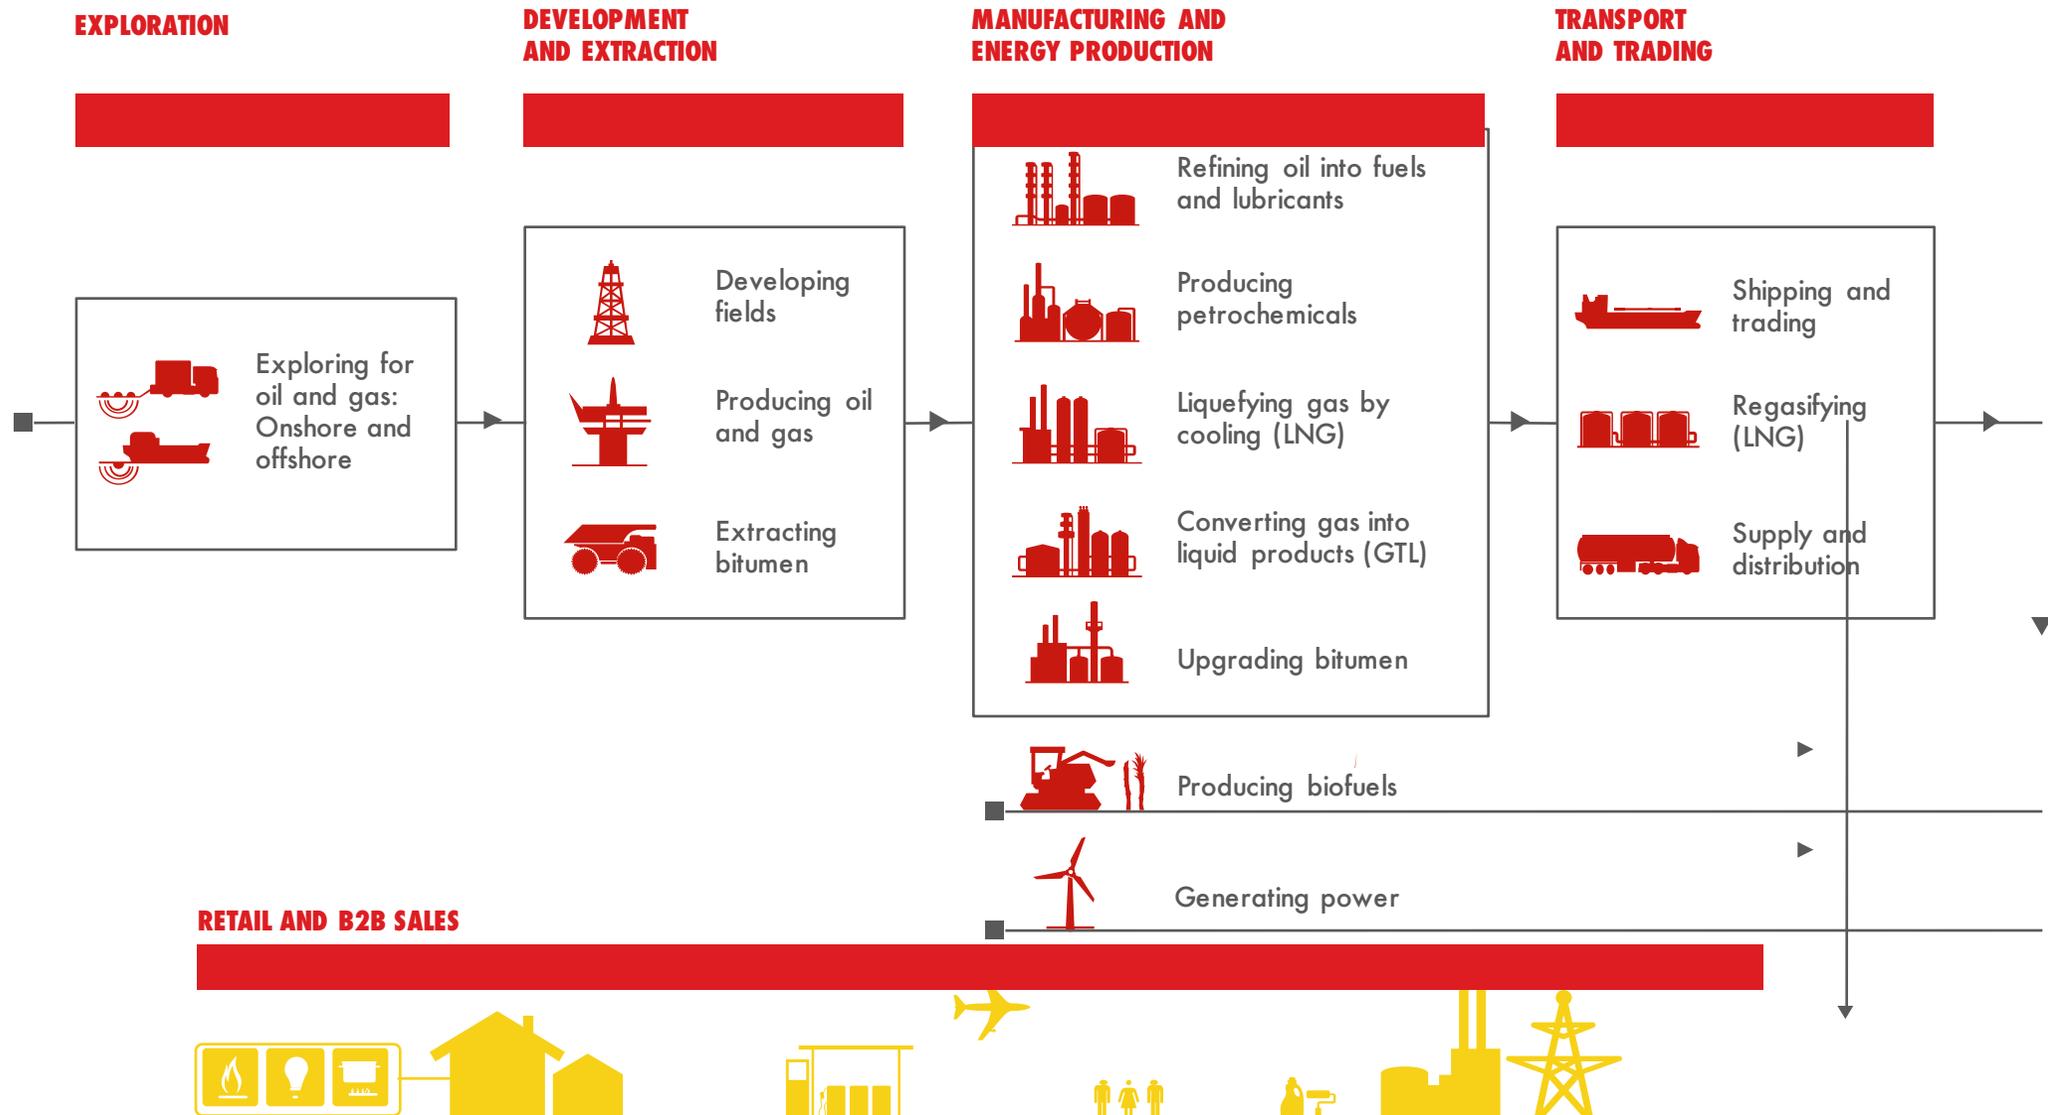

- Brief Introduction to Shell Global Lubricants.
- Our Objectives:
 - In our business context what is a Virtual assistant.
 - Our Goals
- What do our customers and distributors expect from us.
- What types of queries do we get now through existing channels.
- Have a clear strategy and understanding of your business.
- Define the key elements and complexity of the requirement.
- Getting started.
- How to evaluate potential vendors.
- Designing typical Q & A flows.
- Results of the Pilots.
- Phase 2 deployments
- Did it meet our goals?
- The future of AI.

COMPANY PROFILE

- Shell is an innovation-driven global group of energy and petrochemical companies
- We are active in more than 70 countries
- Worldwide, we employ 93,000 full-time employees
- Our fuel retail network has around 43,000 service stations
- On average, we produce 3 million barrels of oil equivalent per day (crude oil and natural gas).
- In 2015, we:
 - generated earnings* of \$3.8 billion
 - had \$28.9 billion of capital investment
 - spent \$1.1 billion on R&D
- Royal Dutch Shell plc is a UK company, with its headquarters in the Netherlands
- We are listed on the stock exchanges of Amsterdam, London and New York

*On a current cost of supplies basis attributable to Royal Dutch Shell plc shareholders

BUSINESS OVERVIEW

BUSINESSES AND FUNCTIONS

<p>UPSTREAM</p>	<p>INTEGRATED GAS</p>	<p>DOWNSTREAM</p>	<p>PROJECTS & TECHNOLOGY</p>
<ul style="list-style-type: none"> ■ Operated ■ Joint ventures ■ Deepwater ■ Safety & environment ■ Production excellence ■ Exploration 	<ul style="list-style-type: none"> ■ Venture development ■ Production excellence ■ Qatar ■ Australia & New Zealand ■ Russia ■ Safety & environment ■ Ventures ■ Commercial/NBD 	<ul style="list-style-type: none"> ■ Refining ■ Pipelines ■ Chemicals ■ Trading and Supply ■ Retail ■ Lubricants ■ Business to business ■ Biofuels 	<ul style="list-style-type: none"> ■ Innovation, R&D ■ Technical IT ■ Project execution ■ Global technical expertise ■ CO₂ management ■ Safety and environment ■ Contracting and procurement
<p>FINANCE</p>	<p>HR & CORPORATE</p>	<p>LEGAL</p>	
<ul style="list-style-type: none"> ■ Finance ■ IT ■ Investor relations ■ Tax ■ Strategy ■ Planning and appraisal ■ Internal audit 	<ul style="list-style-type: none"> ■ HR ■ Real Estate ■ External Relations ■ Shell Aircraft ■ Health ■ Security 	<ul style="list-style-type: none"> ■ Legal ■ Compliance ■ Intellectual property 	

- With around 43,000 service stations in over 70 countries, Shell has one of the largest single-branded fuel retail networks in the world
- Every day, we sell nearly 430 million litres of fuel
- A heritage of fuels innovation has led to the development of Shell V-Power and Shell FuelSave, designed to improve engine performance and help save fuel
- Partnerships with leading retailers combine quality fuel and convenience food
- Technical relationships - e.g. with Scuderia Ferrari - mean we can transfer innovative technologies developed for the racetrack to road fuels for customers

LUBRICANTS

- Shell is the global leader (in terms of market share and branded product) in finished lubricants
- We make and sell a wide variety of lubricants for the automotive sector, heavy-duty transport, mining, power generation, construction and general manufacturing sectors
- Our leading brands include Shell Helix, Shell Rotella, Pennzoil, Quaker State, Shell Tellus and Shell Rimula
- Our lubricants are available in more than 100 countries
- Through partnerships with major motor racing teams, we transfer the technology of the race track to the road

In Shell's business context what is a Virtual Assistant?

A Virtual Assistant is a computer generated, animated, artificial intelligence virtual character that serves as an online customer service representative (Technical & CSC). It leads an intelligent two way conversation with users. It should be able to answer both Lubricants and fuels technical questions that are asked by our distributors + B2C and B2B customers.

Our Goal

- Deliver a new and innovative service that demonstrates technology leadership.
- To divert simple technical helpdesk (THD) interactions to a lower cost to serve channel.
- To introduce a 24/7 self serve channel for technical support.
- Significantly increase service level to customers.
- Ensure consistent & legally correct answers given.
- Gain better insight around technical & service needs of our customers.
- Deliver faster customer service.
- Test case for use of natural language apps in other areas of Shell.
- To promote self serve.

CUSTOMERS & DISTRIBUTORS EXPECT SHELL TO PROVIDE TECHNICAL INFORMATION, ADVICE & SUPPORT*

Customer/Distributor needs information, advice or support

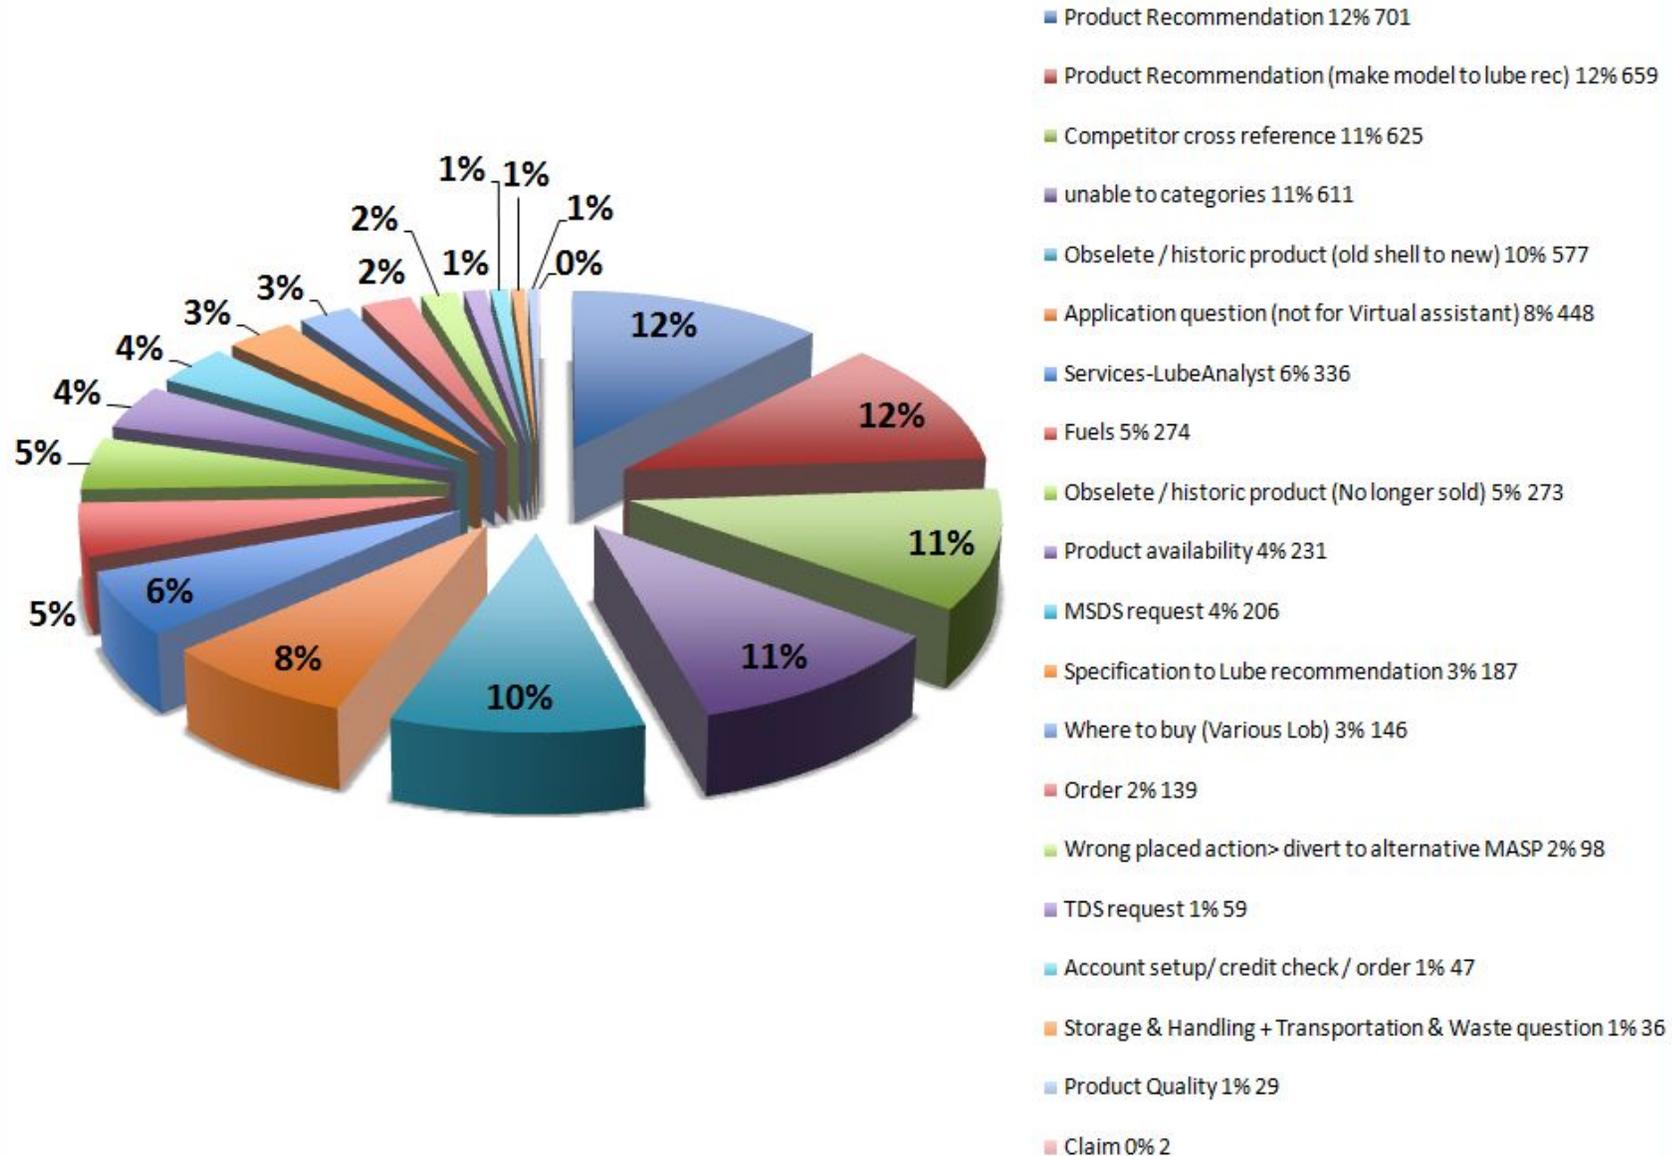

The spectrum of technical queries that Shell receives can be formed into 6 categories

*Commercial fuels & lubricants

QUERIES BY CATEGORY

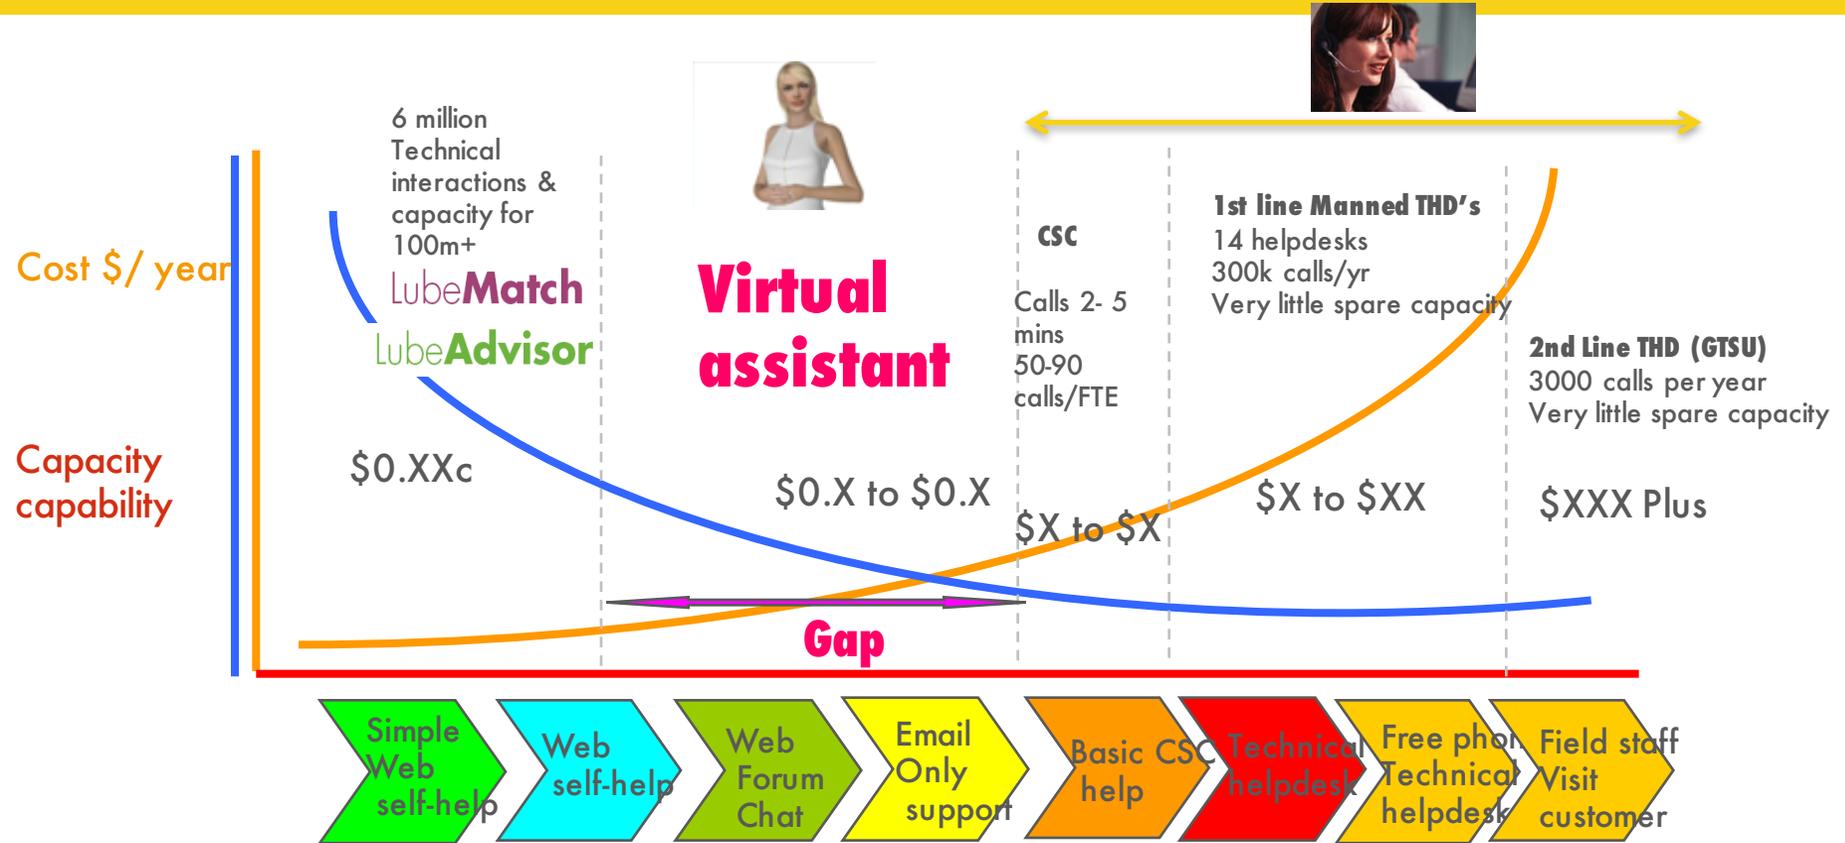

Helpdesk Queries by Categories

THERE ARE 6 QUERY CATEGORIES & 28 QUERY TYPES

 Documents	 Recommendations	 Availability	 Properties	 Product/ Application Advice	 Complaints/ Other
<ol style="list-style-type: none"> 1. Requests for TDS & MSDS 2. Requests for Certificates (COA, COC) 3. Requests for brochures/ DVRs 	<ol style="list-style-type: none"> 1. Product alternatives x-ref 2. LubeMatch queries 3. Product family queries 4. Product range info 5. Old Shell to new Shell product 	<ol style="list-style-type: none"> 1. Where to buy 2. Pack size availability 3. Product availability 	<ol style="list-style-type: none"> 1. Physical properties – general 2. Physical properties – extended 3. Test methods – standard 4. Test methods – complex 5. Specification info – basic 6. Specification info – complex 7. OEM approvals 8. Formulation-related query 	<ol style="list-style-type: none"> 1. Technical product query – simple 2. Technical product query – complex 3. Application query – simple 4. Application query – complex 5. Technical application query – simple 6. Technical application query – complex 7. LubeAnalyst report interpretation 	<ol style="list-style-type: none"> 1. Complaints 2. Misplaced actions (incl. complaints)

HAVE A CLEAR STRATEGY & UNDERSTANDING YOUR BUSINESS

By Polarising support we can move 45% of our simple B2C and distributor calls to much lower costs technical support Options.

This will free up our skilled technical resources to focus on direct market Gold and Platinum account.

By doing this we will improve service levels whilst at the same time reducing costs.

Today approx 45% of calls are simple, 49% complex & 6% complaints

At least 40% of calls come from the Indirect channel.

DEFINE THE COMPLEXITY OF THE REQUIREMENT

Handles over **3,000** Shell products, providing answers and information based on:

- **100,000** Information data sheets
- **1,000** different pack options
- **1,100** different physical characteristics

Recognizes **2,000** obsolete Shell products (and recommends current Shell alternatives)

Understands over **31,000** products from Shell competitors

- Offers the best Shell alternative product

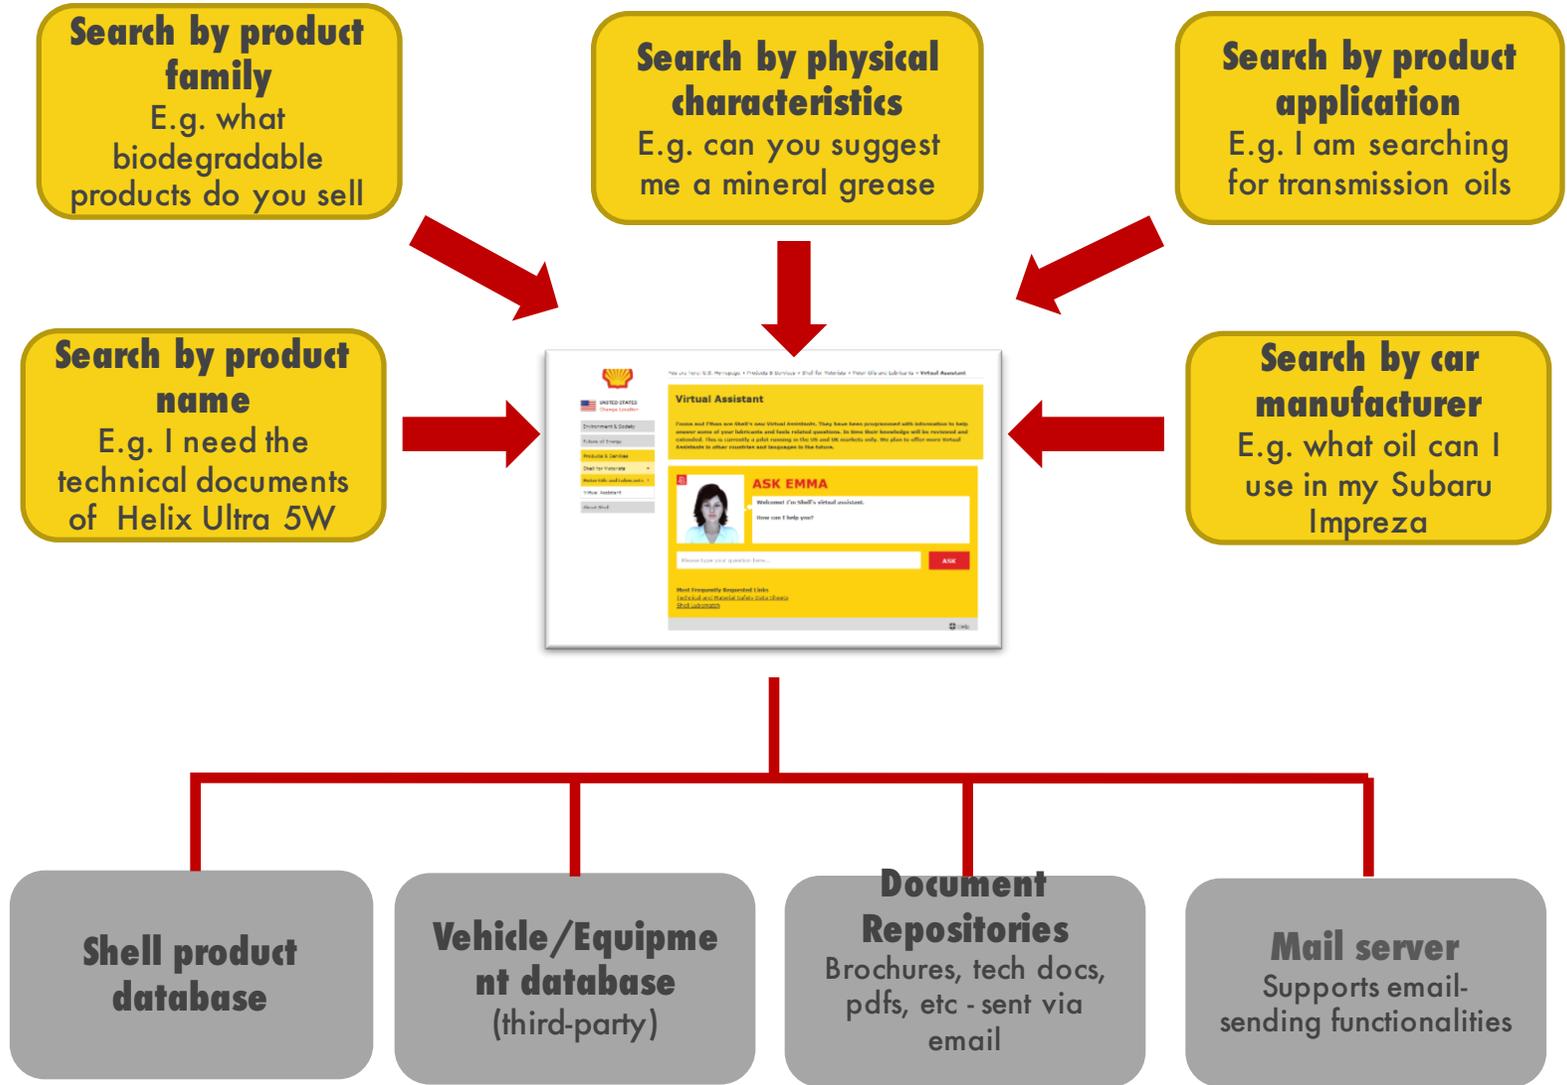

Correctly redirects 'misplaced' customer queries to the correct location drawn from **40** different departments within Shell

Speaks multiple languages including Russian, Chinese, German & different variations of English

Operates in **151** different countries

Needs to interface with many different databases and sources.

SUPPORTS COMPLEX SEARCH

GETTING STARTED

- Define a clear scope, business case and strategy.
- Gain support from the management team.
- Establish a Steering group, core team and local teams.
- Appoint lead roles SC, Technology lead, IT PM and KN leads.
- Review Gartner studies and vendor ranking.
- Pre shortlist 3 or 4 vendors.
- Engage with vendors, get introductory presentation and visit some customers.
- Create a list of questions, example data for the main Q & A categories and request that vendors prepare a real live demo of all scenario's. which is to be presented to the team along with the RFQ / offer.
- Evaluate , Select and contract.
- Implement in pilots
 - System / tools training.
 - Workshop all flows face to face with the TM and KM team + Vendor team.
 - Implement pilots.
 - Measure / monitor and improve.

HOW TO EVALUATE POTENTIAL VENDORS

■ Provide real life example questions for all the main KM areas to the vendors.

Virtual Assistant functionality demonstration questions.									
Type of Question	legal involvement	Identity request	Authentication request for firewall bypass	Actual question asked by the customer	Interaction / process required	data source you need to interface with	Explanation of data fields provided	Correct answer / required action you should demonstrate	
Basic Technical data sheet request for a technical datasheet (TDS) or Material safety data sheet (MSDS) normally a PDF or Word document in local language.		password access or secure server connection will be required to the GPC / EPC	Yes	1. I need a datasheet for a shell product. 2. I'd like a TDS / MSDS for Tellus hydraulic oil. 3. In English for the UK. Demonstrate a couple of examples, one using SP / GPC code, one using the product name and one for TDS and another for MSDS. You should also demonstrate how the virtual assistant can interact around the product type (the lubricants, the type of product (hydraulic oil) and the viscosity so that it could ask which of say number of product choices (of Tellus) it could be. What would happen if the customer asked for TDS and MSDS in the same question, demonstrate this also. What would happen if the customer asked for two different product TDS's in the same question, demonstrate this also.	The system needs to find out what type of product the customer needs information on i.e Fuel, Lubricant, Bitumen, Gas or chemical, what application of product(Gear oil, hydraulic oil, coolant, engine oil etc), which viscosity is required (e.g. 5, 15, 32, 46 etc) what country and language is required, which specific Tellus grade the customer wants a datasheet for and once it has successfully worked out the correct product it should then email the PDF for that product in a nicely scripted email which looks like it has come from a real person on the Shell Technical helpdesk or be signed from Lisa the virtual assistant. Is the customer knows the GPC or SP code for the product this should be a short cut through the questioning process and go straight to the answer.	See data for question 1 tab Internet (Public) View http://www.epc.shell.com/ Intranet (internal to Shell) View http://ssw-gpview.shell.com/	product materials or order code which the customer may know. External name: This is the full name of the product, the customer may know this but often misses the "Shell" or may get the suffixes wrong. They may only know the "Family name" (the Tellus bit only) in which case you can only offer them choices of product from which they would need to choose. Product class: Type of product say "Lubricant", "Fuel", "Bitumen", "Chemical", "Gas". Country name: this is the country that the product is available in. Product sub group: This is the type of product so "Hydraulic oil" or "Gear oil" etc. SaleProd Country Stat: This column tells you that the product is available in that specific country. Pack Name: This gives the name of the pack size that the product is available in (e.g 209 Litre drum). Pack stat: This must be "Active" to indicate that the pack is actually available. Doc Language: This give the	GPC or SP code: 000D7747 Product type (Product class): Lubricant Type of datasheet: TDS Viscosity: ISO 15 Country : UK Language : English Product name : Shell Tellus S2 V 15	
*Product Brochure request		password access or secure server connection will be	Yes	I'd like a brochure for: example 1. LubeAnalyst example 2. Helix	To establish which brochure is required and if the results yield two or more options should the	Brand central url: https://www.brandcentral.shell.com/			

■ Provide for each question example data / databases so the vendors can make demonstration examples for each.

VENDOR RANKING

- Document the criteria that are important to your business.
- Give each item a weighting.
- Decide on the measures and proof points you need, to establish a score for each vendor.
- Discuss and align your core team what score should be given to each vendor for that item.
- The best decision is absolutely clear at the end of this process.

DESIGNING TYPICAL QUESTION FLOWS

LubeMatch Flow

TDS/MSDS Flow

VA - PILOT

Shell Virtual Assistants were first piloted in the US and UK in April 2014

Intuitive, helpful and expert, our intelligent computer generated agents, Shell Virtual Assistants Emma & Ethan can dynamically interpret, understand and respond to online customer requests for help or information.

Available 24 hours, anywhere with online access

Provides IMMEDIATE assistance for basic technical questions

Easy conversational style: speaking our customers' natural languages

Market trends - Why did we develop Shell VA?

Increasing demand by customers for quick, online assistance, anywhere, anytime:

Already tried and tested by a wide range of blue chip companies

At least 15% of Fortune 1000 companies use a virtual assistant (Banking/Retail)

60% of customers use a company's website as the first method for resolving their issues

Potential benefits

Significantly increase our service level to distributors and customers

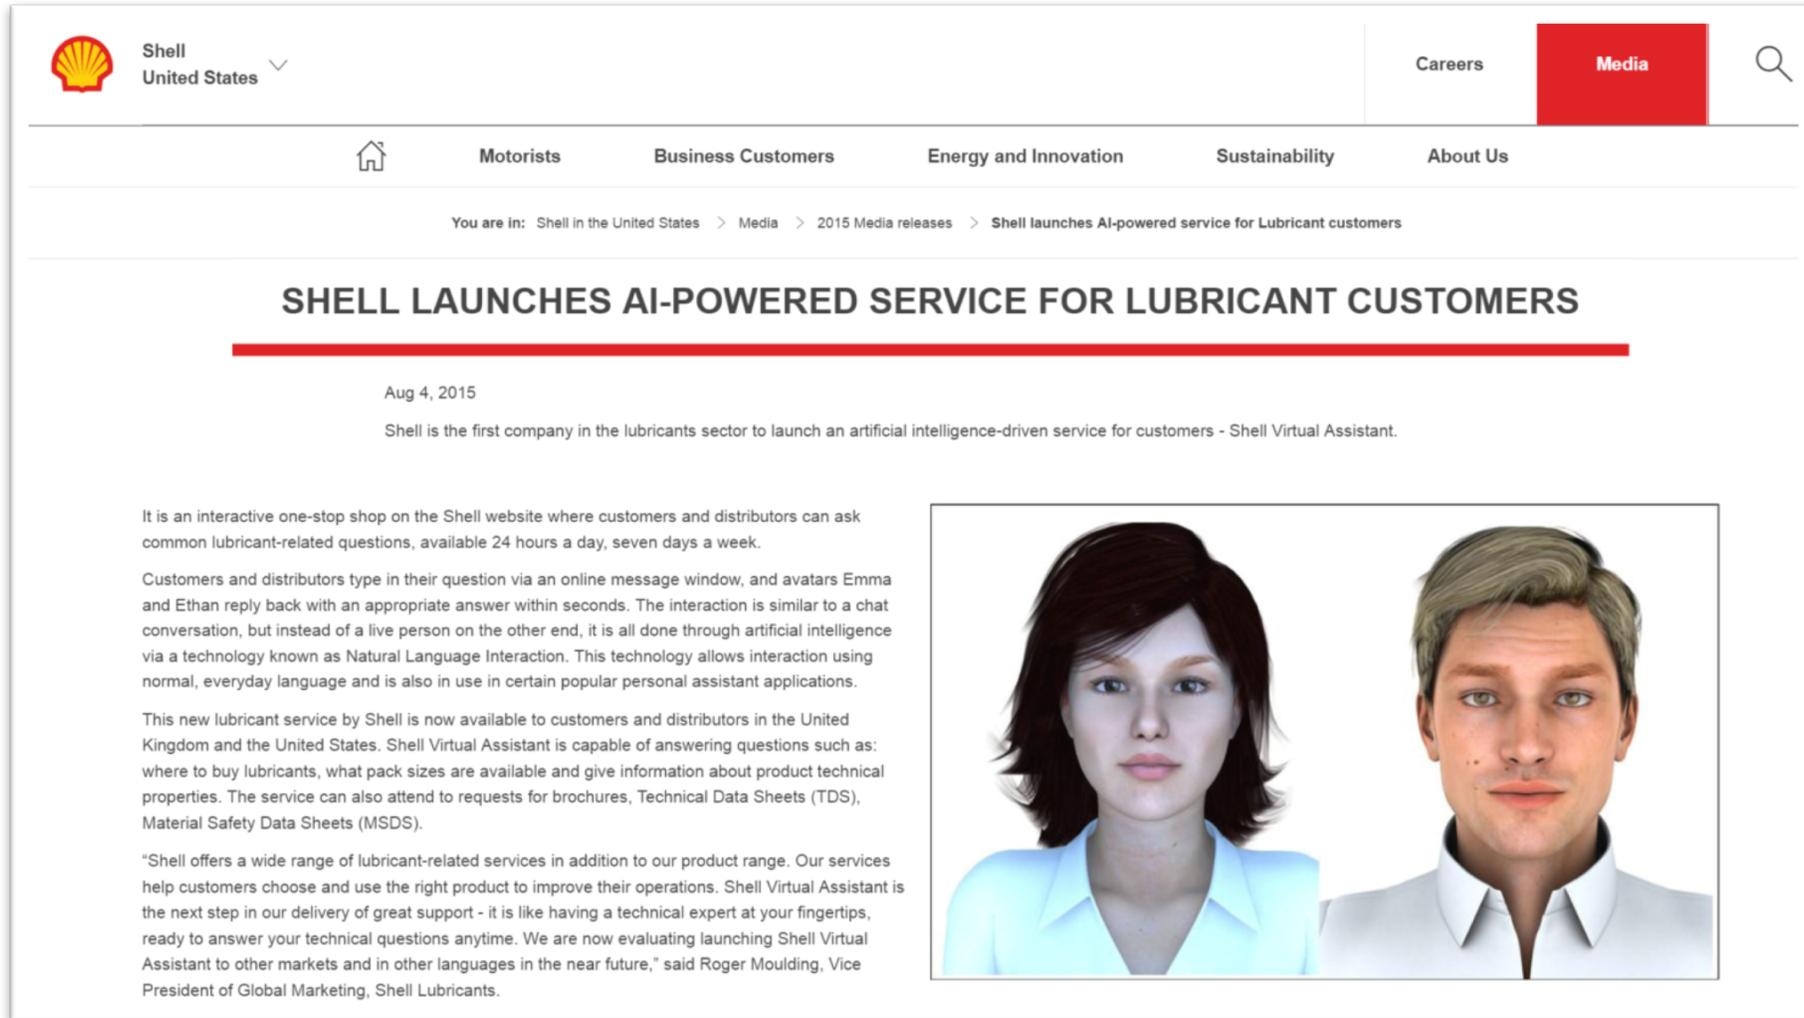

Consistent and legally correct answers given

Better insights into our customers technical and service needs gained through usage data gathering

Enables us to link multiple databases and potentially decommission some IT systems

Faster customer service

SHELL LAUNCHES AI-POWERED VIRTUAL ASSISTANT

The screenshot shows the Shell website's media page. At the top left is the Shell logo and 'Shell United States' with a dropdown arrow. To the right are 'Careers' and 'Media' (highlighted in red) with a search icon. Below is a navigation bar with 'Home', 'Motorists', 'Business Customers', 'Energy and Innovation', 'Sustainability', and 'About Us'. A breadcrumb trail reads: 'You are in: Shell in the United States > Media > 2015 Media releases > Shell launches AI-powered service for Lubricant customers'. The main heading is 'SHELL LAUNCHES AI-POWERED SERVICE FOR LUBRICANT CUSTOMERS' with a red underline. The date is 'Aug 4, 2015'. The lead text states: 'Shell is the first company in the lubricants sector to launch an artificial intelligence-driven service for customers - Shell Virtual Assistant.' The body text describes the service as an interactive one-stop shop available 24/7, where customers type questions and AI avatars Emma and Ethan reply. It lists capabilities like answering questions about buying lubricants, pack sizes, and technical properties. A quote from Roger Moulding, Vice President of Global Marketing, is also included. On the right is a photo of two AI avatars, a woman and a man, representing Emma and Ethan.

SHELL LAUNCHES AI-POWERED SERVICE FOR LUBRICANT CUSTOMERS

Aug 4, 2015

Shell is the first company in the lubricants sector to launch an artificial intelligence-driven service for customers - Shell Virtual Assistant.

It is an interactive one-stop shop on the Shell website where customers and distributors can ask common lubricant-related questions, available 24 hours a day, seven days a week.

Customers and distributors type in their question via an online message window, and avatars Emma and Ethan reply back with an appropriate answer within seconds. The interaction is similar to a chat conversation, but instead of a live person on the other end, it is all done through artificial intelligence via a technology known as Natural Language Interaction. This technology allows interaction using normal, everyday language and is also in use in certain popular personal assistant applications.

This new lubricant service by Shell is now available to customers and distributors in the United Kingdom and the United States. Shell Virtual Assistant is capable of answering questions such as: where to buy lubricants, what pack sizes are available and give information about product technical properties. The service can also attend to requests for brochures, Technical Data Sheets (TDS), Material Safety Data Sheets (MSDS).

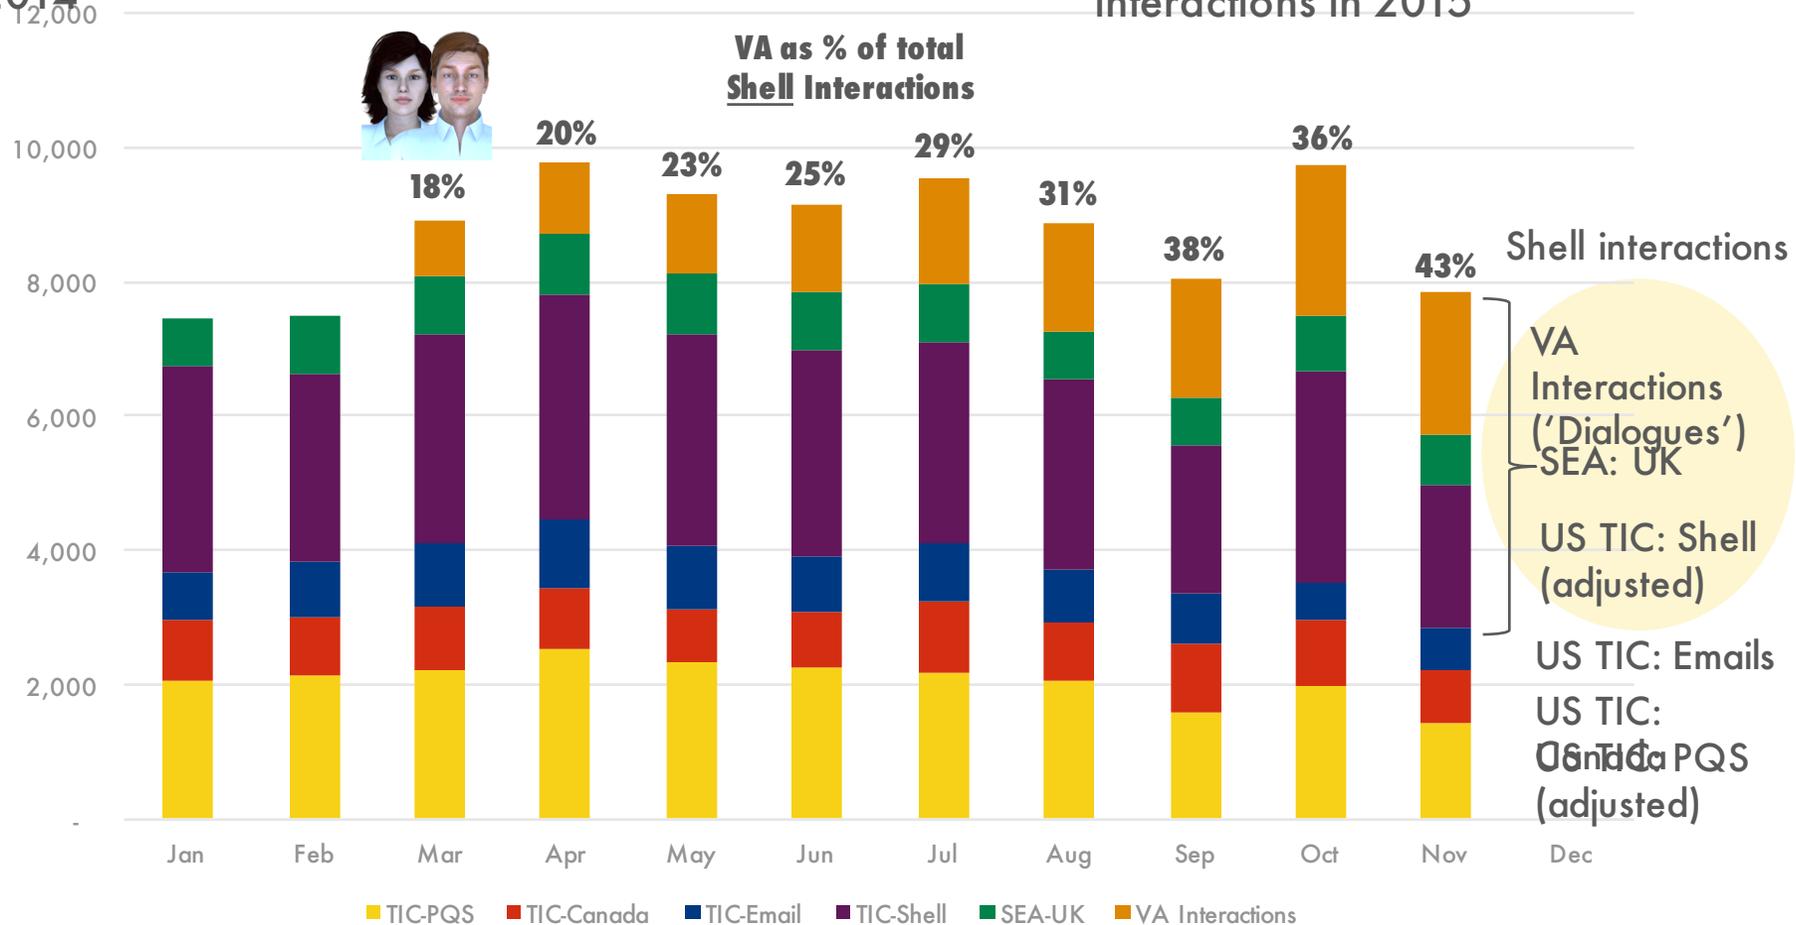

"Shell offers a wide range of lubricant-related services in addition to our product range. Our services help customers choose and use the right product to improve their operations. Shell Virtual Assistant is the next step in our delivery of great support - it is like having a technical expert at your fingertips, ready to answer your technical questions anytime. We are now evaluating launching Shell Virtual Assistant to other markets and in other languages in the near future," said Roger Moulding, Vice President of Global Marketing, Shell Lubricants.

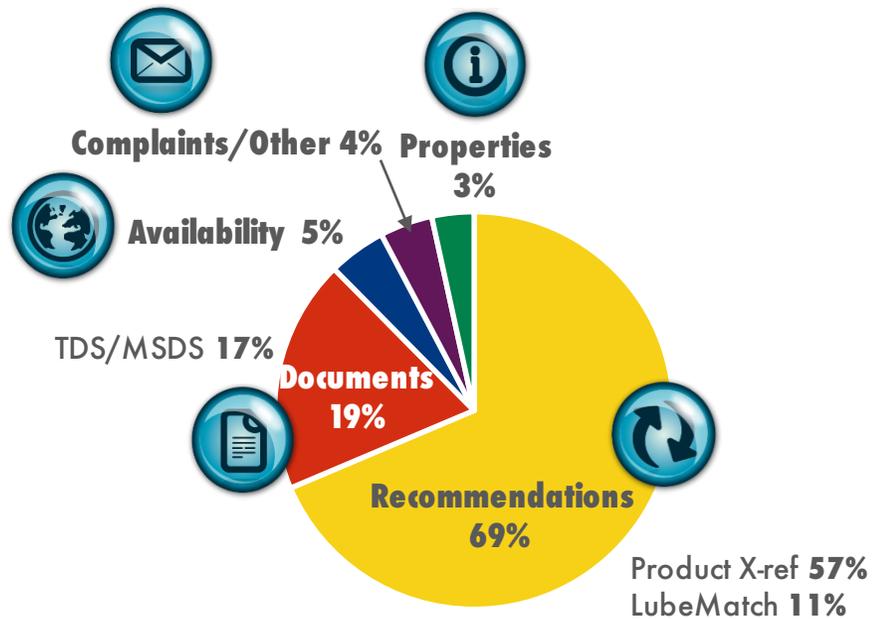

VA Results: INTERACTIONS GREW CONSISTENTLY DURING THE 2014 US/UK PILOT

Regional Helpdesk + VA Interactions
2014

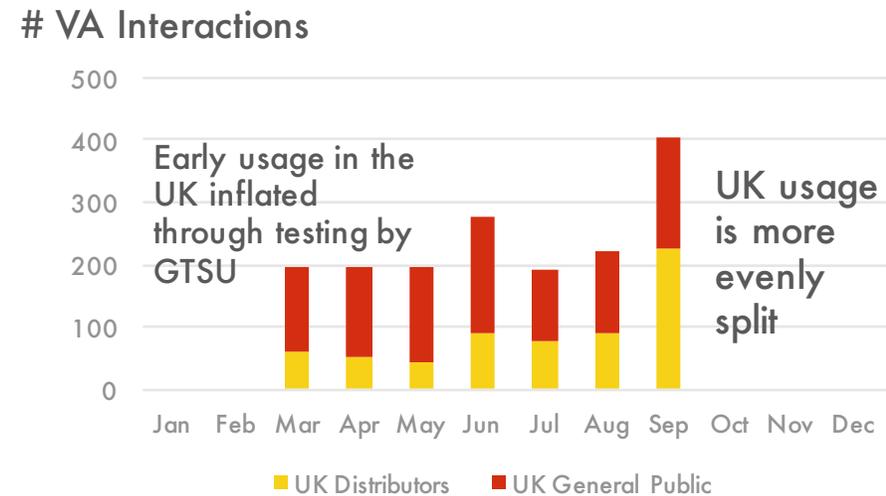

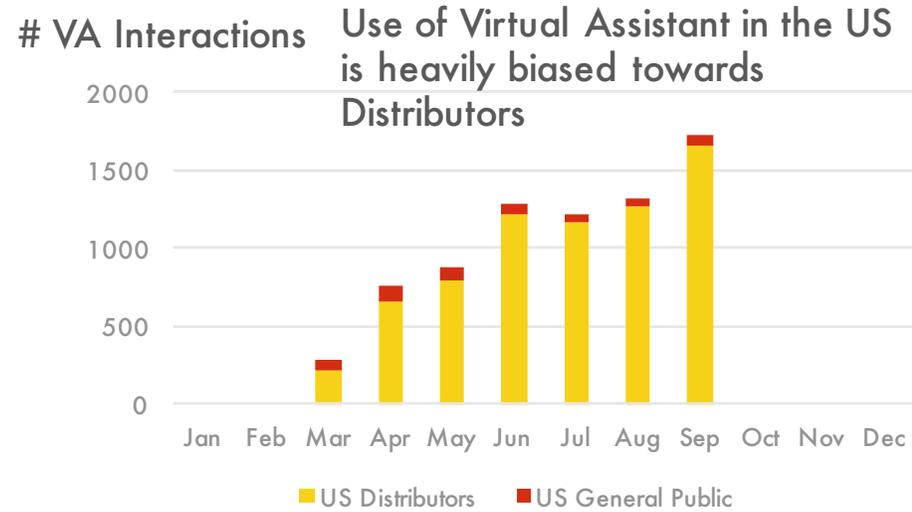

A simple extrapolation would suggest **50%** virtual Shell interactions in 2015

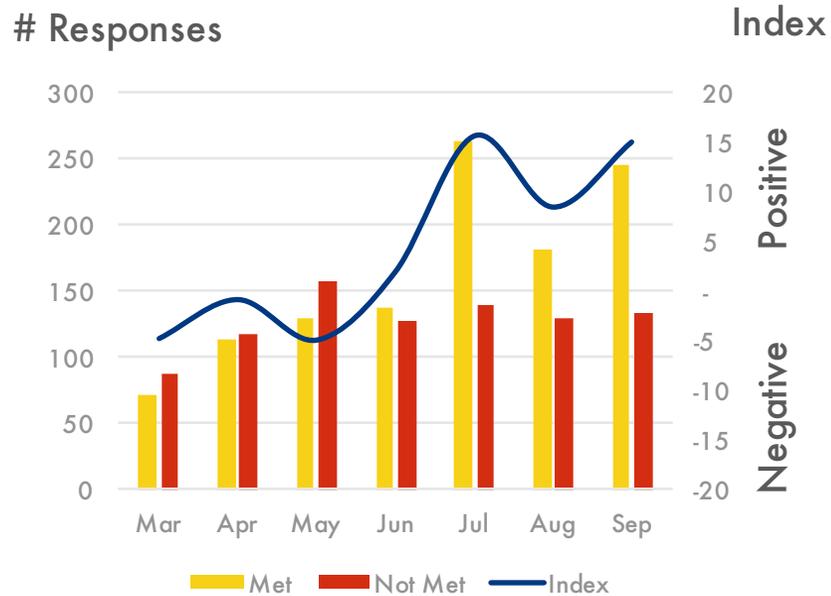

88% OF VA INTERACTIONS ARE REQUESTS FOR PRODUCT RECOMMENDATIONS AND DOCUMENTS

Based on 13,700 US/UK VA Interactions
1 Apr - 7 Oct 2014

USER FEEDBACK HAS BEEN STRONGLY POSITIVE IN THE LAST THREE MONTHS OF THE US/UK TRIAL

‘I have now used this tool a couple of times and I think it’s fantastic. It will be very beneficial for staff at depot level and will enable a much faster response to prospective customers.’

Gleaner Oils (UK Distributor)

‘Basic questions it answers very well, however when we are stuck it is usually a little more technical, and it struggles to assist, ands we revert to the usual channels.’

Certas Energy (UK Distributor)

Shell's Virtual Assistant has become a great help to me. I have been using it with increased frequency. I share it not only with others in my office, but other branches in my company. When technical application questions arise, having information compiled in one database is very useful. I really like having the ability to retrieve information like Technical Data Sheets and Material Safety Data Sheets with ease. The link to Lube Match is also a useful feature. I know the team developing the "Assistant" is continually loading more and more valuable information. With that in mind, I hope to be using Shell’s Virtual Assistant for years to come.

Joe Lasuen, A&I Distributors – Boise (US Distributor)

THE SHELL VIRTUAL ASSISTANT

- Lives in our Shell.com website and interacts with website visitors
- Built using Artificial Solutions' Teneo Platform
- Interprets the meaning and context of free-format queries
- Has the intelligence to learn, reason, understand and apply this knowledge to real customer interactions
- Exhibits many 'smart' NLI capabilities such as:
 - Memory
 - Handles ambiguous inputs
 - Capable of performing fuzzy searches in the product catalogue given partial or incorrect names given by the user
- Free-format, conversational inputs captured and interpreted to deliver actionable insight

PHASE 2 DEPLOYMENTS 2015/6

New Flows Added

- Product Application - hydraulic oils
- Product Application - compressor oils
- Product Application - transmission oils
- Shell Old to New

Global Solution

Separation of US and UK Solutions

New Country Roll Outs - Sept

- India "Lite" - India, Philippines, Singapore, Malaysia

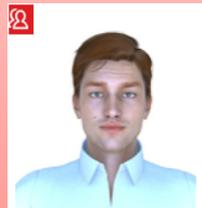

Shelly

- Germany

Julia Wagner

Konrad Müller

New Country Roll Outs - Dec

- China

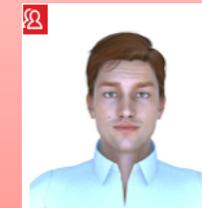

Xiaobei

- Russia

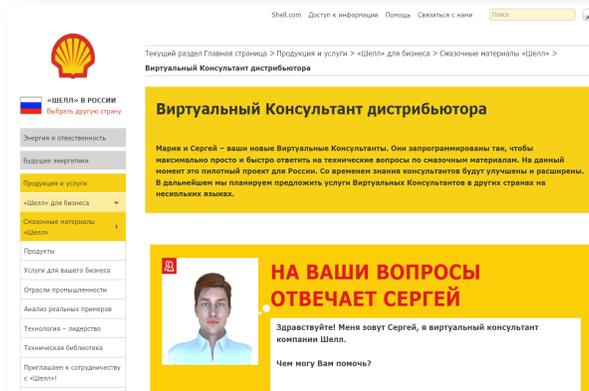

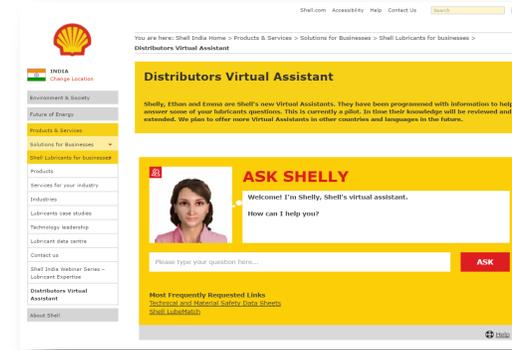

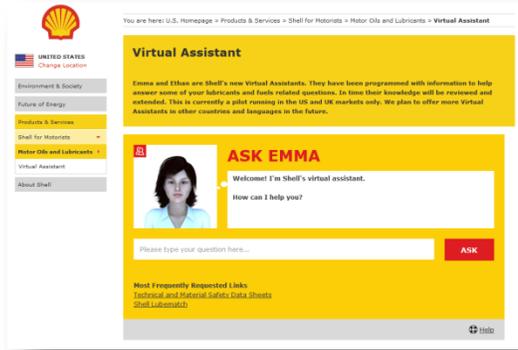

Maria - Мария

Sergei - Сергей

NATURAL LANGUAGE - DEPLOYED

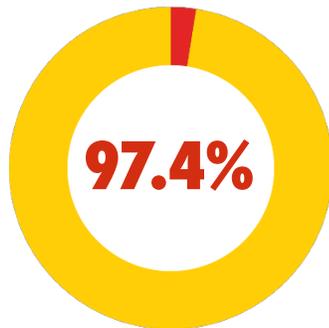

DID IT MEET OUR GOALS....THE STATS

40% reduction in call volume to live agents

74% of issues successfully resolved

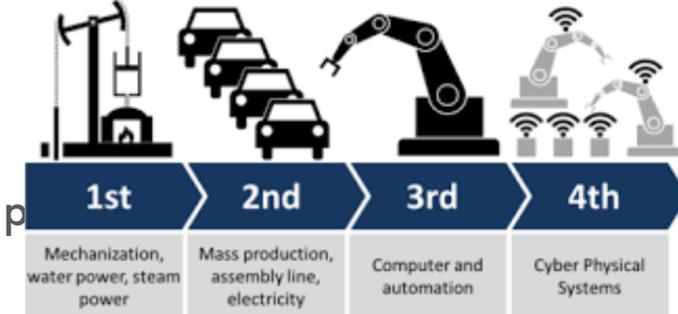

97.4% of questions correctly understood

98.8% of answers meet user expectations

THE FUTURE OF AI.

- Focus on further increasing intelligence, including:
 - Deploy in more countries / globally.
 - Proactivity based on personalization eg - up and cross selling
 - Broaden the knowledge base.
 - Cross selling and Upsell.
 - Proactive VA + possibly mobile.
 - Further develop failing gracefully techniques for KM gap
 - Further integration of other databases and services.

- Accepting that Natural Language will pervade, exploring new areas:
 - In-car integration – e.g. need oil, which oil, where to buy
 - At the pump – captive market, VA channel etc.
 - Virtual buddy / helper (Listening VA).
 - Will play a part in the next industrial revolution which will be a Cyber Physical world. (Industry 4.0, Internet of things and big data)
