Mobile Engagement with Aruba

Bluetooth vs. Wi-Fi

- Wi-Fi is less reliable for location services
- Wi-Fi is required for analytics
- Bluetooth Low Energy (BLE) is required for location services
- Bludot & zone based push notifications

Location by BLE Beacons Advantages

When Beacons Handle Location

- ✓ Works well for iOS and <u>new</u> Android devices
- Apple makes a move, and other handset manufacturers will follow.
- Less expensive than other hardware approaches

Aruba Improves on the Beacon Concept

- Compatible with newer Android and iOS devices supporting iBeacon spec (iOS7+)
- Less expensive than other hardware approaches
- Possible to achieve excellent accuracy (<1m) and low latency (<2sec) for wayfinding/notifications
- Site-survey tools and remote monitoring to help IT pros scale deployment
- Aruba agility: adapt, manufacture, and deploy before announcing solution

Comprehensive Management Tools for Beacons

Deploy using one of the two options

- Battery powered & wall mounted
 - USB powered

Position inside the indoor map

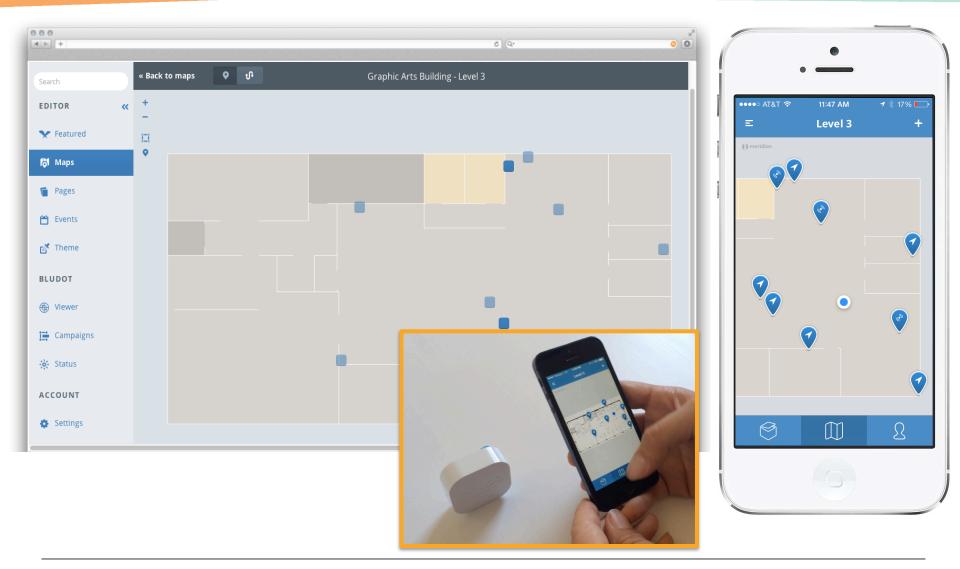

- Use Aruba Beacons mobile app
- Also used to run active site-surveys

Use the Meridian platform to manage

- Battery power level
 - Beacon status
 - Update firmware

How Does Aruba Wi-Fi Help Manage Beacons?

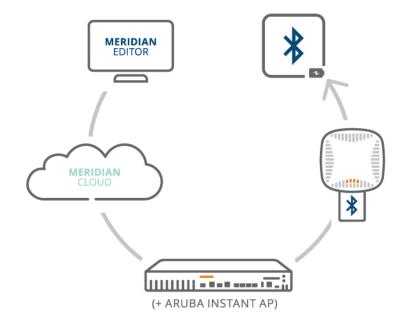

ARUBA USB BEACON PLUGS INTO AN ARUBA WI-FI AP.

ARUBA AP COMMUNICATES WITH ARUBA BATTERY-POWERED BEACONS AND MERIDIAN CLOUD VIA ARUBA **CONTROLLER (OR ARUBA INSTANT AP).**

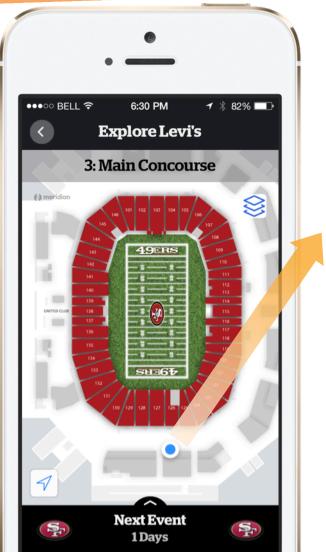

ENTERPRISE CUSTOMER EDITS ARUBA BEACON DETAILS FROM WITHIN MERIDIAN CLOUD EDITOR. AND EDITS ARE BROADCASTED TO THE ARUBA **BATTERY-POWERED BEACON VIA THE ARUBA BEACON/ARUBA AP ECOSYSTEM.**

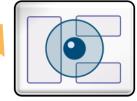

Levi's Uses Meridian SDK with Aruba Beacons

Beacon SDK

BluDot SDK

NavKit SDK

- Levi's Stadium app integrates Meridian SDK
- Location services powered by 1,000+ Aruba Beacons
- 2,100 food orders with the app during the first game

THANK YOU
